

How to Build a Hitting Screen

Side View

Stand slant toward you so the screen doesn't fall forward

Hitting Screen

Material: 25 feet of plumbing pipe (2") (inside)
5 elbows
2 straight Y's
2 T joints

Strong mesh to be wrapped around the front and back of the screen...
Secure the mesh on the screen with a strong thin rope or treated string.

The Y in the frame will give you an opportunity to turn the screen around and have a left-hander pitch to the hitters.

Caution: The height of the screen will be determined by the size of the chair you use or if you want to stand.
